Stocks of Grains

in All Positions

October 24, 1961

RECORD CORN AND SORGHUM GRAIN STOCKS

Stocks of old crop corn and sorghum grain in all positions on October 1 were at record high levels for the date. Corn stocks at 1,998 million bushels exceeded the record of the previous year by more than a tenth and sorghum grain stocks increased to 701 million bushels, a fifth larger than the record holdings of October 1, 1960. Wheat stocks of 2,342 million bushels were fractionally below the record level of a year earlier. Stocks of oats, barley, rye, soybeans, and flaxseed were each below a year ago. Soybean stocks amounted to only a fourth of the previous year with rye declining about a fifth and flaxseed a third. Oats and barley stocks were about a tenth below last year. The relatively sharp volume increase for corn and sorghum grain more than offset the decline for oats and barley to push total feed grain stocks to a record high of 101 million tons, more than 6 percent above a year earlier.

Wheat stocks of 2,342 million bushels stored in all positions were practically the same as a year earlier but 43 percent larger than average. The stocks total was nearly double the 1961 production, reflecting a large carryover of old wheat on July 1. Off-farm wheat stocks of 1,887 million bushels were the largest of record. Nearly two-thirds of the total stocks were either owned by the Government or were under Government loan.

Rye stocks in all storage positions at 28.9 million bushels were nearly a fifth below a year ago but 7 percent above average. Farm stocks of 13.7 million bushels were 23 percent less than a year earlier and off-farm stocks of 15.2 million bushels were down 15 percent. Holdings in CCC bins were relatively small; however, 29 percent of the off-farm stocks was either owned by CCC or under CCC loan.

Old Corn in all storage positions established a new record of 1,998 million bushels, 12 percent larger than the previous October 1 high of a year ago. Farm stocks of 569 million bushels were 26 percent greater than last year's total of 452 million bushels. Only 44 percent of the farm stored corn was under CCC loan (reseal) while a year earlier nine-tenths of the farm stocks were under loan. Stocks in off-farm positions totaled 1,429 million bushels, 7 percent above a year ago. CCC owned more bushels of corn than a year earlier but the percent of off-farm corn stocks controlled by the Government declined from 95 percent on October 1, 1960 to 93 percent on October 1, 1961. Disappearance of corn from all storage positions during July-September 1961 set a new record for the quarter.

Oats stocks in all storage positions on October 1 totaled 957 million bushels, 11 percent less than the quantity on hand last October 1 and 17 percent below average. These total stocks are the smallest for this date since records were started in 1943 and reflect the small 1961 production. Stocks in off-farm positions, estimated at 113 million bushels, were down 7 percent from a year ago while farm holdings are 12 percent smaller than last year. Disappearance during the July-September quarter this year, at 360 million bushels, is the second lowest of record for this quarter.

Barley stored in all positions on October 1 totaled 424 million bushels, a tenth less than the total stocks a year earlier but 17 percent above the 10-year average. Farm stocks of 232 million bushels were 17 percent smaller than on October 1, 1960 but off-farm storages held slightly more barley than a year ago. The CCC owned or had under loan about a third of the off-farm stocks and nearly a fifth of the farm stocks were under Government loan including reseals and purchase agreements. Disappearance during the July-September quarter was 108 million bushels compared with 125 million bushels for the same period in 1960 and the record high of 154 million bushels in 1959.

Sorghum grain carryover stocks in all storage positions on October 1, at 701 million bushels, were record high for the date--a fifth larger than the previous high of a year ago. Nearly all of the 670 million bushels in off-farm storages were owned by CCC. Stocks of old crop sorghum grain on farms totaled 31 million bushels, 8.5 million bushels or 37 percent larger than a year earlier. Nearly two-thirds of the farm holdings were under Government loan including reseals. Disappearance of sorghum grain during the July-September quarter was 51 million bushels, somewhat below the record 55 million bushel disappearance for this quarter last year.

Soybean carryover stocks in all storage positions on October 1 were estimated at 5.0 million bushels. This small carryover is only about one-fourth the 23.2 million bushels on hand a year earlier and the smallest October 1 stocks since 1956. Most of the stocks were in the off-farm positions as only 1.6 million bushels were on farms.

Current stocks indicate a disappearance for the crop year, October 1, 1960 to September 30, 1961, of 576 million bushels. This is from a total supply of 582 million bushels (carryover October 1, 1960 of 23.2 million plus the 1960 preliminary production estimate of 558.8 million bushels). Estimated disappearance for the period includes about 401 million bushels processed for oil, nearly 130 million bushels exported, and seed, feed and losses of about 40 million bushels. Thus, actual disappearance for the crop year totals 571 million bushels which is less than a 1-percent difference from the indication of production and stocks.

Flaxseed stocks in all storage positions on October 1 totaled 17.8 million bushels. This is about one-third less than the 26.1 million bushels on hand a year ago and the smallest stocks for the date since records began in 1947. Of the total stocks, 8.4 million bushels were stored on farms and 9.4 million bushels were in off-farm positions. Current stocks indicate a disappearance during the period July-September of 8.9 million bushels from a supply of 26.7 million (carryover of 5.3 million plus new crop of 21.4 million bushels). During the quarter crushings were reported at 5.2 million bushels and exports are estimated at nearly 1 million bushels. This does not take into account new flaxseed processed prior to July 1.

Stocks of grains, October 1, 1961 with comparisons
(In thousand bushels)
